# League Ratings

This view provides the current ratings of the teams.

## Identify week of play

1. Move with the mouse over a week number to display the date of that week. Move out to remove the date display.
2. Tap on a week number to display the date of that week. Tap the same week number again to remove the date display.
3. Note that your league might have a different color theme.

## Ratings explained

The *Ratings League* view or, if your league is divided into Divisions, the *Ratings Division* view show the total of player ratings gained or lost per team per week played. The last column **Matches** shows the equivalent to match points won where the team as a whole gained rating points, which in most cases is different from the actual won matches. For example, a weak team can gain rating points when playing a stronger team even if they lose. In this view, a (positive) rating gain of the weaker team would add to the match points even if they lost the match.
